

Urban Change Detection Report

Comparing 2018 vs 2024

Executive summary

Between 2018 and 2024, approximately 0.0% of the analyzed area changed (~0.0 hectares), an estimated annual growth rate of 0.00% per year. No significant directional trend detected. Of the changed area, 0.0% appears built-up/other change, 0.0% shows vegetation loss, and 0.0% shows water-body change. 6.0% of the newer image was flagged as low-confidence (cloud/shadow) and should be interpreted cautiously.

Summary statistics

Metric	Value
Total pixels analyzed	190,857
Changed pixels	0
New / changed area	0.00%
Time span	6 year(s)
Estimated annual growth rate	0.00% / year
Changed area	0.000 km ² (0.0 ha)
Annual growth area	0.00 ha / year
Mean data confidence	94.0%
Low-confidence area (cloud/shadow)	6.0%

Land-use change breakdown

Category	% of scene
Built-up / other change	0.00%
Vegetation loss	0.00%
Water-body change	0.00%

Direction of change

No significant directional trend detected.

Projected growth

Before / after comparison

2018 (left) vs 2024 (right)

Change hotspots

Grid-based change density — shows where change is concentrated

Data confidence

QA validity map for the newer image (darker = lower confidence)

Change detection outputs

Binary change bitmap

Change probability heatmap

Change bitmap overlaid on the newer image

NDVI (vegetation index)

NDVI — 2018

NDVI — 2024

NDVI change magnitude

NDVI change overlaid on the newer image

NDWI (water index)

NDWI — 2018

NDWI — 2024

NDWI change magnitude

NDWI change overlaid on the newer image
